Signage Spotlight — Brewer Public Safety

When it came time for the [City of Brewer](#) to add the finishing touches to their new public safety building, Neokraft Signs had the solution. After consulting with the city of Brewer and [WBRC Architects](#), Neokraft Signs knew that seamless integration with the buildings was a key factor in the finished look of not only the signs, but the entire building complex.

Neokraft painstakingly reproduced the city seal for dimensional routing on its MultiCam 3000 router. If made of copper, these five-foot diameter seals would have each weighed nearly 1,000 pounds and cost taxpayers tens of thousands of dollars for building reinforcement to carry such loads. Neokraft produced the seals from urethane foam and utilized the patented [LuminOre® Copper metalizing process](#) with a true copper patina post-processing finish. The end result were two magnificent, five-foot-diameter copper seals that weighed only 65 pounds each!

The addition of an internally lit main entrance ground ID sign and [energy-saving LED](#) halo-lit wall letters gave the finishing touches to the Public Safety complex.

Neokraft signs is proud to have been a part of the new Public Safety Building project. [Contact us](#) today to find out how Neokraft can help your own municipality with any similar projects!

Perfect sign integration with the new building and masonry produced a finished look that supports the integrity and professionalism of the Brewer Public Safety Police & Fire Depts.

Neokraft's MultiCam3000 router provided the state-of-the-art technology, speed and 3D routing capabilities needed to produce both seals the for Brewer Public Safety building

After the creation of a LuminOre™ genuine copper patina, Neokraft hand-finished the highlights to bring the copper seals to life.

The patented LuminOre™ metalizing process was applied by Neokraft to create the genuine copper surface finish, shown here in its raw form.

The buildings at the Brewer Public Safety complex in Brewer, Maine, include two LuminOre™ copper finished Urethane Foam seals, LED halo lit formed letters, and a freestanding ground ID sign. Complete sign packages such as this are a Neokraft specialty!
