

Quick-Trim Notcher

The Quick-Trim Notcher

Produces perfect trim out of coiled stock that is prenotched to the exact degree needed, so the trim wraps around the letter correctly, with bending instructions, in one computerized controlled machine.

Machine Capabilities:

1. Trim depth 1" x 2"
2. Letter height unlimited

Letter Layout Process

1. Export a standard DXF file to the *QUICK-TRIM* machine.
2. Select a letter, set a start point and press RUN TOOL the machine does the rest.

Features:

1. Touch screen interface, with user friendly software in a Windows environment.
2. Equipped with a command that self calibrates the machine between every letter, router bit curving loss compensation, multiple letter, continuous job, control point filter, bend degree control, divide letter, and much more.

If you already own a channel letter machine, than you probably realize that the trim department is falling behind. This machine can help. It will increase production and relieve the stress on the trim employs.
